

## SmartClean RETURNED FILE FORMATS

### Telephone Number Files

#### For Wireless Identification Services,

Two files, in the original format will be returned. One will contain the numbers identified as Landlines and the other will contain the numbers identified as Wireless.

#### For Recycle Number Identification files,

The original file will be returned with the “result” code appended in the first field

Result codes are as follows:

- Y = Number may be called (no Disconnect)
- N = Ownership has changed
- U = Number cannot be identified

#### For Telephone Number Append files,

The file will be returned with the Results Code and Original Data followed by the appended Name

Result codes are as follows:

- Match = Name has been appended
- Unk = Unknown (did not match our data base)

### Mailing List Files

#### **Customer File:**

The following fields will be appended to the customer's original delimited record layout:  
(Maximum field lengths are in parentheses ())
